Informational Student Meeting

Tuesday, March 5th

@ 12:00pm – 3:00pm

Location: Anderson Hall / Room 207

12:30-1:30pm LUNCH SERVED 1:30pm–3:00pm PRESENTATION

Presented by
Hancock Forest Management

As the property management subsidiary of Hancock Timber Resource Group (HTRG), the Hancock Forest Management (HFM) team provides active management at the property level, seeking to protect and enhance the lands we manage and maximizing the value of the associated timberland and forest products. Our forest management approach integrates property-level activities with portfolio-level objectives. This investment strategy is one of the most effective ways investors can reduce overall portfolio risk. We currently invest in and manage properties across North America, Australia, New Zealand, Canada and Brazil.

As the backbone of our property management team, Foresters, Engineers and Wildlife Biologists are responsible for the day-to-day, on the ground, timberland management services for HTRG’s clients. Hancock Forestry means a commitment to meeting the highest standards for timberland property management. We combine leading forest management techniques with outstanding environmental stewardship to provide maximum value to our institutional investors.

In the Pacific Northwest, Hancock Forest Management manages lands in Washington, Oregon, Idaho and Northern California – or, join us on the 5th and ask us about our other locations.
